

How Lookout Protects Against Scattered Spider

What is Scattered Spider?

Scattered Spider, aka UNC3944, is a financially motivated threat actor that has been active since March 2022 and historically targeted telecommunications, cryptocurrency, and business process outsourcing (BPO) organizations. The group compromises data by targeting users in social engineering attacks directed at the user's phones to steal their credentials and use them to gain access to systems that host sensitive data.

The group became more widely known after it successfully targeted and gained access to the infrastructure of Caesars Entertainment in 2023.

What tactics are in use?

By socially engineering targets through mobile form factors such as SMS phishing, voice phishing, Telegram, SIM swapping, and MFA fatigue, Scattered Spider has a track record of impersonating IT or contractor personnel and stealing login credentials. They are known to attack the mobile device to steal credentials, bypass MFA solutions and gain initial access.

Once the actor has compromised a user's account, they create virtual machines in cloud and on-prem infrastructure to carry out the data-focused attacks and exfiltration. In particular, they are known to take advantage of systems that lack EDR capabilities. Its victims now span hundreds of organizations in technology, hospitality, transportation, and entertainment.

| Tactic | How Lookout Protects |
|--|--|
| Mobile phishing and social engineering | Lookout is constantly identifying new URLs that match the patterns that threat actors use and implements protection against those URLs as part of our Mobile Endpoint Security (MES) solution. |
| Desktop phishing and social engineering | Lookout Secure Internet Access, a SWG solution, can also block malicious domains. This is particularly important to address as messaging solutions evolve beyond mobile to be used on desktops. |
| Credential compromise and unauthorized data access | Lookout Secure Cloud Access, a CASB solution, detects anomalous user behavior indicative of a compromised account such as irregular login locations, access to apps atypical apps, and large data transfers or copies. |

How Does Lookout Protect Against Scattered Spider?

Protect Your Organization From Evolving Cyber Threats — Try Lookout Mobile Endpoint Security Free For 90 Days or Contact Us Today "Lookout mobile endpoint provides services that solve an ever-growing need for advanced security for mobile devices that are most vulnerable to attacks, as user tends to open various links/ website across any Wi-Fi."

Engineering, Software Industry

Endpoint Security

"We had a great experience with the Lookout endpoint security solution in our organization. It protects our mobile devices from advanced threats and scans devices very well. It allows us to browse safely and track device locations for advanced security."

Product Management, Healthcare and Biotech Industry

Endpoint Security
