How to Leverage Lookout Threat Intelligence

Your pass to unmatched mobile security and protection

Overview

Lookout has been a research-first security organization from the very start — investigating everything from exploits targeting mobile operating systems to threat actor groups using mobile vectors to infiltrate networks and spy on individuals at risk. Lookout Threat Intelligence collects and analyzes proprietary data points to provide your security teams with comprehensive protection capabilities against the latest mobile cyber attacks.

As more adversaries turn their attention to mobile platforms, keeping up with the evolving mobile threat landscape has never been more important. Lookout Threat Intelligence is powered by the world's largest mobile security dataset of telemetry from more than 315 million mobile apps, 450 million malicious sites, and 220 million iOS, Android and ChromeOS devices.

The Lookout Threat Intelligence team is composed of former bug bounty hunters, penetration testers, government intelligence analysts, vulnerability researchers and more. We have a passion for identifying mobile threats and sharing intelligence with the cybersecurity community and our customers.

We provide three key services to enable customers with industry-leading mobile threat intelligence. Depending on your needs, each of these services can be purchased standalone or together.

Mobile Endpoint Security (MES) Premium is the most advanced version of our mobile threat defense offering. In addition to protecting employee mobile devices from phishing, app, network, and device threats, Premium grants access to a research console for proactive threat hunting and monthly reporting from the Lookout Threat Intelligence team.

Threat Intelligence Services offer a range of services built for dedicated security operations centers (SOCs) and threat research teams. These include access to the threat data that Lookout's own researchers use, comprehensive analysis of advanced malware and mobile APT campaigns, and bespoke research hours to fill your intelligence gaps.

Digital Forensics and Incident Response (DFIR) Services are for organizations who have experienced a security incident and need to include mobile device forensics as part of their incident response process. Thanks to our core leadership in mobile threat intelligence, Lookout can offer this service to help gain previously unseen insight into the risk posed by mobile devices. We can work independently on your case or collaborate with other third party incident response vendors you are engaged with as part of the service.

Benefits

Intelligent risk management
Understand the most prevalent threats to help inform your security risk management decisions

Stay ahead of the attackers
Lookout researchers actively identify and provide actionable information such as IOCs in STIX 2 format that you can use to improve your mobile security strategy and overall security posture.

Build stronger business cases
Use quantified risk data to demonstrate the relevance of mobile threats and gain support for mobile security initiatives across your organization.

Secure mobile infrastructure
For mobile network operators and organizations responsible for the security of entire mobile fleets, Lookout services offer critical, actionable insights that allow you to make better investments in protecting your mobile infrastructure.

About Lookout

Lookout, Inc. is the data-centric cloud security company that uses a defense in-depth strategy to address the different stages of a cybersecurity attack. Data is at the core of every organization, and our approach to cybersecurity is designed to protect that data in the modern threat landscape. With a focus on people and their behavior, the Lookout Cloud Security Platform ensures real-time threat visibility, and quickly halts breaches from initial phishing attempts to data extraction. To learn more, visit www.lookout.com and follow Lookout on our blog, LinkedIn, and X.
